Future enhancement –

It can be platform where the AI technology can be applied for the prediction of users behaviors and patterns of user dealing with tools and identify the very critical problems .

AI techniques can give us the data which can be utilized to prevent suicide attempts.

The MONGO DB database can be utilized to take out the graphs of behavior patterns and analyses the same .

The user while registration can be asked for alternative contacts. If suspicious behavior observed can be alert to alternative contact

Flow chart
